100% FMS Extended™

Professional Turf Fertilizer Premium Grade (SGN 200)

Product Features

- Maintenance fertilizer containing a unique and proven coating technology that provides precise, extended feeding.
- Contains three sources of nitrogen with different release rates; Fast, Medium and Slow. The 100% slow and controlled release nitrogen is derived from Methydure® combined with Nutryon® 120-Day and Nutryon® 180-Day polymer coated ureas.
- Phosphorous-free fertilizer.

Turf Benefits

- The slow-release nitrogen materials release over an extended period (up to 25 weeks) without promoting excessive leaf growth. These sources do not stimulate shoot growth to the extent that root growth is negatively affected. The gradual nitrogen release enhances the recuperative potential of turfgrass.
- Designed to reduce the number of fertilizer applications and ideal for operations with limited labour. This extra-long feeding FMS™ fertilizer provides up to four months of steady feeding from 100% slow and controlled release nitrogen. Combines two longevities of polymer-coated nitrogen with methylene urea in specific proportion ensures a constant supply of nitrogen to the turf while minimizing nitrogen losses to the environment.
