

AGRI-SUL

Granular Sulphur for Lowering Soil pH.

mini & regular particle size

Product Features

- Homogeneous particle
- Agri-Sul breaks down and releases nutrients after irrigation.

Turf Benefits

- Agri-Sul aids in reducing soil pH. Nutrient uptake is significantly reduced in more alkaline soils.
- Sulphur is easily leached in sand root zones. Agri-Sul helps replenish the soil with required sulphur.
- Plants need 15 parts of nitrogen to one part of sulphur for protein synthesis. Agri-sul helps balance the nitrogen to sulphur ratio required (15:1) for optimum growth and darker colour.

Guaranteed Minimum Analysis

		%
Sulphur	(S)	90.0

Application Rates

Bag kg (lb)	Product application rate
25 (55)	Follow soil test recommendations for application rates. Do not apply more than 2 kg/100m ² (4 lbs/1000ft ²) per application of elemental sulphur or exceed three applications per season. Irrigate immediately after application. Reducing a high alkaline soil pH usually requires more than one growing season. Monitor soil pH every year to determine the need for additional sulphur application(s).
